Advancing Digital Citizenship Education Across Europe

Tracking our progress in building responsible, informed, and safe digital citizens.

What is Digital Citizenship?

Digital Citizenship means participating safely, ethically, and actively in the digital world. It involves rights and responsibilities, critical digital skills, and informed engagement. The framework is built on three key pillars:

- Respect
- Education
- Protection.

How our Project results can help:

• E-Learning Platform

An online eLearning course that aims to **provide the necessary skills and knowledge on digital citizenship and all related topics**: from the basics of digital citizenship to netiquette, from critical evaluation of information to digital well-being, each of the 6 modules addresses a specific topic in a simple and interactive way.

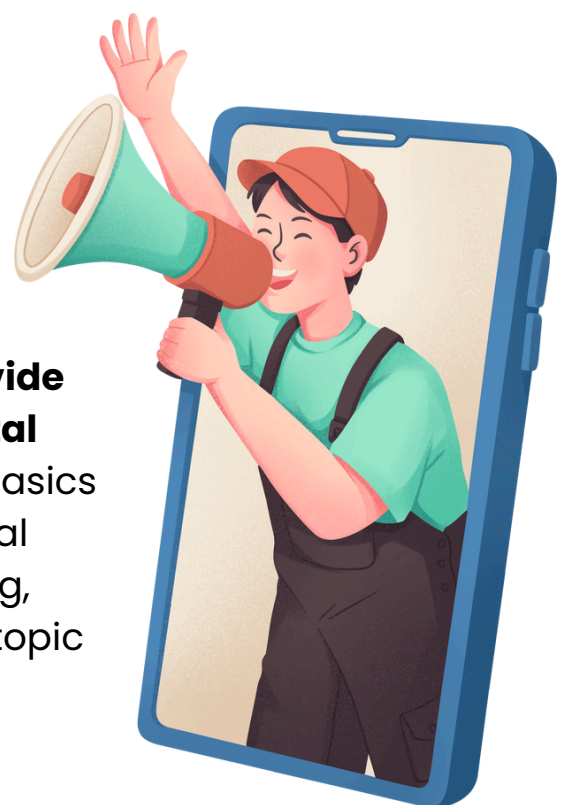

• Pedagogical Sequences

40 Pedagogical Sequences designed to help integrate digital citizenship and related topics into lessons. Divided into 7 key categories, each pedagogical sequence provides step-by-step guidelines and ready-to-use materials to **make teaching digital citizenship effective, engaging, and impactful**.

• Reality Tasks Toolkit

A collection of 30 engaging situational cards on digital citizenship, based on real-life scenarios and divided into seven key topics.

These practical and interactive resources help students and teachers **navigate the digital world safely, ethically, and responsibly**.
